

PRACTICAL 9

FINAL TASK

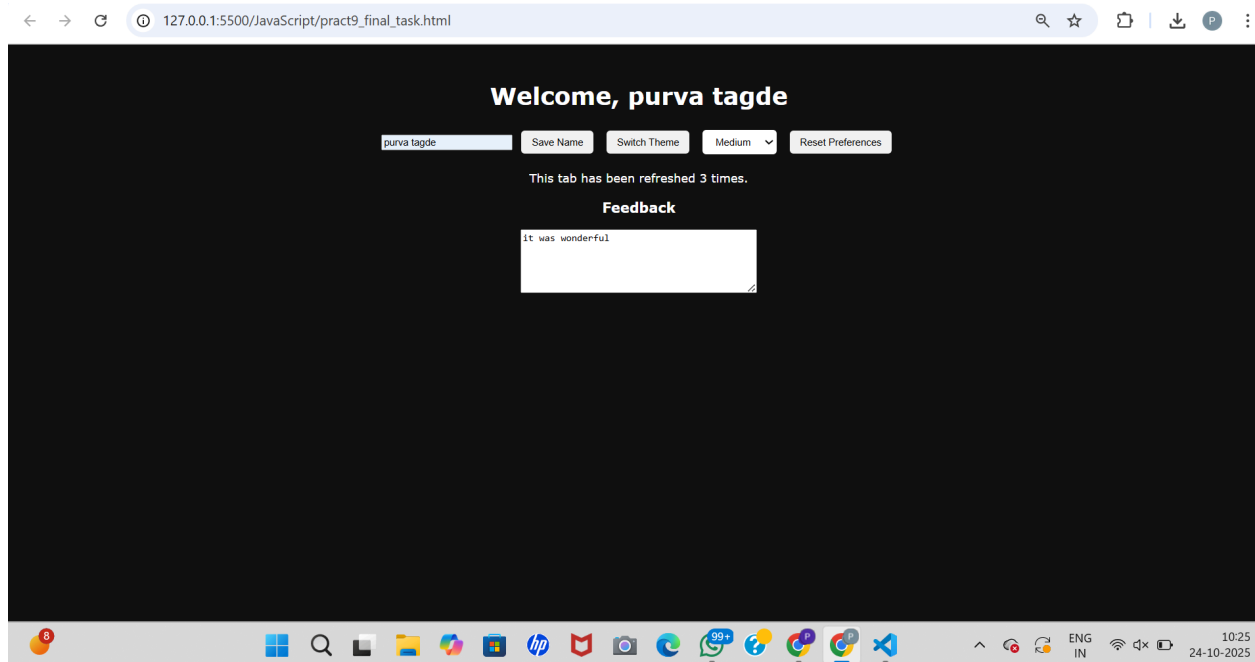

Aim

Implement a Personalized Dashboard that uses both localStorage and sessionStorage to remember user settings and temporary state.

Scenario

You are creating a “Personal Dashboard” that remembers a user’s:

- Name (persistent)
- Theme (light/dark)
- Font size (small/medium/large)
- Temporary visit count (session-only)
- Feedback message draft (session-only)

The screenshot shows the Chrome DevTools Application tab. The left sidebar lists the application's storage areas: Manifest, Service workers, Storage, Local storage, Session storage, Extension storage, IndexedDB, Cookies, Private state tokens, Interest groups, Shared storage, Cache storage, and Storage buckets. The 'Local storage' section is expanded, showing a single item for the origin 'http://127.0.0.1:5500'. The main pane displays a table of this storage item's contents:

Key	Value
fontSizePref	medium
theme	dark
username	purva tagde

Below the table, a message 'No value selected' is displayed. A context menu is open over this message, showing two language options: 'English (United States)' and 'English (India)'. At the bottom of the menu, it says 'To switch input methods, press Windows key + space.' The Windows taskbar at the very bottom shows the system clock as 10:26 on 24-10-2025.
